

**NO PRE-TREATMENT HANDLING RISKS.** The Mark-Costello Co. System utilizes autoclavable carts that can eliminate employee handling of untreated waste from point of generation to final disposal.

**CAPTIAL COST.** The Mark-Costello Co. Sterilizer is by far the least expensive medical waste treatment equipment available.

**STERILIZERS AVAILABLE FOR ANY SIZE FACILITY.** Units are capable of treating 100 to 1,125 lbs. or more, per cycle.

**MAINTENANCE.** Average cost to maintain our stand-alone gravity fed sterilizer is less than \$60.00 per month.

**LONGEVITY.** The Mark-Costello Co. has been manufacturing medical waste steam sterilizers since 1973. There are Mark-Costello Co. Sterilizers still in operation after 20 years of service.

**LEAST COMPLICATED TO OPERATE.** Some companies actually require the hospital to send engineers to the factory for training. The Mark-Costello Co. Sterilizers require nothing more than a brief in-service training period at the site following installation.

**SIMPLE TO INSTALL.** The Mark-Costello Co. Sterilizers are usually installed by hospital personnel.

**EQUIPMENT DESIGN UNCHANGED.** There is no need to be concerned the system will soon be out of date making it difficult to obtain parts and repairs.

**UTILITY CONSUMPTION.** Most Mark-Costello Co. Sterilizers use existing low cost readily available hospital steam supply. Only single phase electricity is necessary. Other highly complicated systems require 3 phase and single phase electricity along with a dedicated telephone line to the unit.

**STEAM STERILIZATION VS. DISINFECTIONS.** Because of the National and World focus on spread of infectious diseases, the eradication of all microbial life in the waste stream is imperative. The Sterilization process is the best assurance the hospital can have for proper spore kill.
